Fat Detection: Taste, Texture, and Post Ingestive Effects (Frontiers in Neuroscience) Jean-Pierre Montmayeur, Johannes le Coutre

Presents the State-of-the-Art in Fat Taste Transduction

A bite of cheese, a few potato chips, a delectable piece of bacon – a small taste of high-fat foods often draws you back for more. But why are fatty foods so appealing? Why do we crave them? **Fat Detection: Taste, Texture, and Post Ingestive Effects** covers the many factors responsible for the sensory appeal of foods rich in fat. This well-researched text uses a multidisciplinary approach to shed new light on critical concerns related to dietary fat and obesity.

Outlines Compelling Evidence for an Oral Fat Detection System

Reflecting 15 years of psychophysical, behavioral, electrophysiological, and molecular studies, this book makes a well-supported case for an oral fat detection system. It explains how gustatory, textural, and olfactory information contribute to fat detection using carefully designed behavioral paradigms. The book also provides a detailed account of the brain regions that process the signals elicited by a fat stimulus, including flavor, aroma, and texture.

This readily accessible work also discusses:

- The importance of dietary fats for living organisms
- Factors contributing to fat preference, including palatability

- Brain mechanisms associated with appetitive and hedonic experiences connected with food consumption
- Potential therapeutic targets for fat intake control
- Genetic components of human fat preference
- Neurological disorders and essential fatty acids

Providing a comprehensive review of the literature from the leading scientists in the field, this volume delivers a holistic view of how the palatability and orosensory properties of dietary fat impact food intake and ultimately health. **Fat Detection** represents a new frontier in the study of food perception, food intake, and related health consequences.

From reader reviews:

Arthur Atwood:

Hey guys, do you desire to find a new book to study? Maybe the book with the subject Fat Detection: Taste, Texture, and Post Ingestive Effects (Frontiers in Neuroscience) suitable to you? The actual book was written by a popular writer in this era. Often the book titled Fat Detection: Taste, Texture, and Post Ingestive Effects (Frontiers in Neuroscience) is a single of several books in which everyone reads now. This kind of book has inspired many men and women in the world. When you read this book you will enter the new dimensions that you have never known before. The author explained their strategy in a simple way, so all of us can easily recognize the core of this guide. This book will give you a wide range of information about this world now. To help you see the representation of the world within this book.

Dennis Taylor:

Besides this kind of Fat Detection: Taste, Texture, and Post Ingestive Effects (Frontiers in Neuroscience) on your phone, it can give you a way to get closer to the new knowledge or data. The information and the knowledge you will get here is fresh from your oven so don't end up being worried if you feel like an outdated person living in a narrow community. It is a good thing to have Fat Detection: Taste, Texture, and Post Ingestive Effects (Frontiers in Neuroscience) because this book offers you personally readable information. Do you often have a book but you do not get what it's exactly about. Oh come on, that would not happen if you have this with your hand. The enjoyable blend here cannot be questionable, like treasuring a beautiful island. Use it; you still want to miss the idea? Find this book as well as read it from currently!

Janet Warren:

That guide can make you feel relaxed. This book Fat Detection: Taste, Texture, and Post Ingestive Effects (Frontiers in Neuroscience) was vibrant and of course has pictures on there. As we know that book Fat Detection: Taste, Texture, and Post Ingestive Effects (Frontiers in Neuroscience) has many kinds or styles. Start from kids until adolescents. For example Naruto or Investigation company Conan you can read and believe that you are the character on there. Therefore not all of the books are usually boring, any of them offers up to you feel happy, fun and chill out. Try to choose the best book for you personally and try to like reading that.

Deanna Reed:

Reading a guide makes you get more knowledge from this. You can take knowledge and information from the book. A book is composed or printed or illustrated from each source that will be filled with updated news. In this modern era like currently, many ways to get information are available for a person. From media social including newspaper, magazines, science publication, encyclopedia, reference book, book and comic. You can add your understanding by that book. Are you hip to spend your spare time to spread out your book? Or just trying to find the Fat Detection: Taste, Texture, and Post Ingestive Effects (Frontiers in Neuroscience)

when you essential it?
