The Socio-Economic Impact of Microelectronics: This Book Is Based on an International Conference Held in Zandvoort, The Netherlands, Which Was Supported by The Netherlands Ministry of Science Policy

The Socio-Economic Impact of Microelectronics contains papers presented at an international conference on socio-economic problems and potentialities of the application of micro-electronics held in Zandvoort, the Netherlands, in September 1979.

Organized into eight sections, this book begins with the technological evaluation of microelectronics. Subsequent sections focus on the social economic and political consequences of the widespread use of microelectronics; opportunities and problems for socialist countries brought about by microelectronics technology; effects of microelectronics on developing countries; as well as problems connected with industrial relations and organization of work. The influence of the technology on political/economic, epistemological, ethical/moral, and esthetic values and a broad concept of informatics introducing the notions of living and non-living environments as well as of human, non-human, constructed, natural, and abstract systems are explained. The last section contains the conclusions of the chairman of the conference on the application of microelectronics.
